Excerpt: . of 1867 followed the great rise of 1867, the two most notable floods of recent times, and both ice.gorge rises. In the report upon the survey of 1883, Major Benyaurd says: -- The oscillation between high and low water is about fifteen feet, though a hight of twentythree feet has been recorded, occasioned by an ice gorge. (Report, Chief of Engineers, 1884, p. 1958. et seq). Mr. Wisner reports: -- The zeros of all these gauges water gauges were established at ten points were connected with all the high and low watermarks to be found along the valley. From an examination of high water marks, it was found that in several places where the river had been gorged with ice, the surface rose to twenty-three feet above the low water plane, but ordinary high water, probably in no case, exceeds fifteen feet above...
